PROJECT DESIGN PHASE

Proposed Solution & Problem–Solution Fit

Medical Diagnosis Center in ServiceNow

Proposed Solution

S.No.	Parameter	Description
1	Problem Statement	Patients and diagnostic-center staff need a consistent way to register patients, select tests, book appointments, process diagnostics and access reports without incomplete data, booking conflicts or delayed communication.
2	Idea / Solution description	Implement a structured Medical Diagnosis Center lifecycle in ServiceNow. The solution connects patient registration, diagnostic test selection, appointment booking, approval, laboratory processing, report generation, payment/refund, notifications and security.
3	Novelty / Uniqueness	The solution connects patient, diagnostic test, appointment, payment and report activities into one traceable workflow.
4	Social Impact / Customer Satisfaction	Faster and more consistent diagnostic-center handling improves the patient experience, while digital reports and notifications reduce unnecessary waiting.
5	Business Model (Revenue Model)	This is an internal healthcare operations solution. Business value is realized through reduced paperwork, improved coordination, faster processing and better operational visibility.
6	Scalability of the Solution	The ServiceNow platform can support growth in patients, appointments, diagnostic tests, staff, locations, reports and future integrations.

Problem–Solution Fit

The Problem–Solution Fit below adapts the uploaded canvas template to the Medical Diagnosis Center project. It connects customer problems, behaviours, triggers, emotions, existing solutions, constraints, gains and the proposed solution.

1. Customer Segments Patients; Receptionists; Laboratory Technicians; Doctors; Lab Managers; Administrators	**2. Jobs-to-be-done / Problems** Register patients; select tests; book slots; approve appointments; process samples; generate reports; manage payments.	**3. Triggers** Patient needs a diagnostic test; appointment is requested; approval is required; appointment is completed; report becomes available.
4. Emotions: Before / After Before: uncertainty and limited status visibility. After: clarity, traceability and timely notifications.	**5. Available Solutions** Manual forms, phone booking, spreadsheets and separate report records.	**6. Customer Constraints** Appointment capacity, mandatory patient information, privacy/security, staff availability and configured booking rules.
7. Pains / Root Causes Duplicate bookings, incomplete records, manual approvals, delayed reports and disconnected information.	**8. Behaviour** Patients browse tests, book and check status; staff approve/process/update; administrators monitor.	**9. Gains / Expected** Accurate bookings, faster processing, centralized records, digital reports and operational visibility.
10. Our Solution A connected ServiceNow Medical Diagnosis Center workflow.	**11. Value / Fit** Directly addresses booking, workflow, report, notification and security pain points.	**12. Channels / Touchpoints** ServiceNow Service Portal, Test Catalog, Book Appointment, My Appointments, Lab Reports and Admin Dashboard.

Fit conclusion: The proposed ServiceNow workflow is a strong fit because it addresses the main diagnostic-center pain points by standardizing registration, test selection, scheduling, processing, reporting and communication.
