PROJECT DEVELOPMENT PHASE

ServiceNow Configuration, Model Performance & Testing

Medical Diagnosis Center in ServiceNow

1. ServiceNow — Model Performance Test

Model Performance Testing

S.No.	Parameter	Values
1	Model Summary	Medical Diagnosis Center application uses ServiceNow custom tables, Service Portal pages/widgets, Business Rules, notifications, ACLs and reports to manage the diagnostic lifecycle.
2	Data Rendered	Patient, Diagnostic Test, Appointment, Report and Payment records.
3	Data Preprocessing	Appointment records are structured by status, approval status, diagnostic test and date/time for operational reporting.
4	Utilization of Data Filters	Appointment status, approval status, diagnostic test, date/time and patient-specific access.
5	Calculation / Validation	Refund Amount = Total Amount – 10% deduction on configured cancellation.
6	Report Design	Appointments Reports groups appointment data by Status and Approval Status and can be added to Health Reports Dashboard.

2. Artificial Intelligence — Model Performance Test

Model Performance Testing

S.No.	Parameter	Values	Screenshot
1	Model Summary	No separate AI model is asserted in the supplied project. Future AI use can summarize diagnostic workflow/report context.	N/A
2	Accuracy	To be measured only after an actual AI model is implemented.	N/A
3	Fine Tuning Result (if any)	Not applicable to the current supplied ServiceNow implementation.	N/A
4	Use Case	Future enhancement: AI-assisted report/workflow summarization without replacing clinical decisions.	N/A

3. Machine Learning — Model Performance Test

Model Performance Testing

S.No.	Parameter	Values	Screenshot
1	Model Summary	No separate ML model is asserted in the supplied project.	N/A
2	Data Used	Appointment history and diagnostic-test information can support future analytics.	N/A
3	Potential Use Case	Predict appointment demand, slot utilization or report delays in a future phase.	N/A
4	Metrics	Accuracy, precision, recall and F1-score after actual model implementation.	N/A

4. Power BI — Model Performance Test

Model Performance Testing

S.No.	Parameter	Values	Screenshot
1	Model Summary	ServiceNow appointment/report data can be exported or connected for Power BI when configured.	N/A
2	Data Preprocessing	Group appointment records by status, approval status, test and date.	N/A
3	DAX Query	Future KPI: Appointment Completion % = Completed Appointments / Total Appointments.	N/A
4	Dashboard Design	Appointment volume, status, approval and report-availability views.	N/A

5. Tableau — Performance Test

Model Performance Testing

S.No.	Parameter	Values	Screenshot
1	Model Summary	ServiceNow appointment and report records can be extracted for Tableau when configured.	N/A
2	Data Preprocessing	Group appointments by diagnostic test, status and date.	N/A
3	Calculation Field	Future example: Days to Report = Report Date – Appointment Date.	N/A
4	Story Design	Booking → approval → processing → report availability.	N/A

6. GenAI Functional & Performance Testing

Test Scenarios & Results

Test ID	Scenario	Steps	Expected Result	Actual Result	Pass/Fail
FT-01	Appointment validation	Enter valid/invalid patient, test, date and time data.	Valid inputs accepted; invalid/conflicting bookings blocked.	To be recorded from execution.	Pending
FT-02	Report availability	Complete appointment and verify report.	Report is generated/linked and available to authorized patient.	To be recorded from execution.	Pending
FT-03	Notification	Approve appointment / create report.	Configured notification is triggered.	To be recorded from execution.	Pending
FT-04	ACL security	Access records using different roles.	Unauthorized access is blocked.	To be recorded from execution.	Pending
PT-01	Appointment save time	Create appointment repeatedly.	Response remains acceptable under normal load.	To be measured.	Pending
PT-02	Concurrent booking	Create several appointments.	Slot validation remains correct.	To be measured.	Pending

7. User Acceptance Testing (UAT) Template

Project Overview

UAT for the Medical Diagnosis Center covers patient setup, diagnostic-test selection, appointment booking/validation, approval, laboratory processing, report generation, notifications, payment/refund, security and dashboard reporting.

Project Version: v1.0 **Testing Period:** 02 Sept 2026 to 08 Sept 2026

Testing Scope

Patient registration · Diagnostic test catalog · Appointment booking & validation · Approval workflow · Laboratory processing · Report management · Notifications · Payment/refund · ACL security · Dashboard/reporting · Final validation

UAT Test Cases

ID	Scenario	Steps	Expected	Actual	P/F
TC-001	Register patient	Enter required patient details; save.	Patient record created.	To be recorded.	Pending

ID	Scenario	Steps	Expected	Actual	P/F
TC-002	Book diagnostic test	Select test/date/time and submit.	Valid appointment saved; conflicts blocked.	To be recorded.	Pending
TC-003	Approve appointment	Approve pending appointment.	Confirmed status and notification.	To be recorded.	Pending
TC-004	Process appointment	Move through sample collection/processing.	Lifecycle progresses correctly.	To be recorded.	Pending
TC-005	Generate report	Complete appointment and verify report.	Report linked to appointment/patient.	To be recorded.	Pending
TC-006	Cancellation/refund	Cancel configured appointment.	10% deduction applied and refund populated.	To be recorded.	Pending
TC-007	ACL access	Test permitted/restricted records by role.	Unauthorized access denied.	To be recorded.	Pending

Bug Tracking

Bug ID	Description	Severity	Status
BG-001	Portal/report access issue if encountered during execution.	Low	To be recorded
BG-002	Booking/ACL validation issue if encountered during execution.	Medium	To be recorded
