IDEATION PHASE

Brainstorm & Idea Prioritization

Medical Diagnosis Center in ServiceNow

Overview

Ideas were generated around the selected problem statement and grouped according to the stage of the medical diagnostic-center lifecycle they improve.

Step 1 – Team Gathering, Collaboration and Problem Selection

Selected problem statement – PS-1
Patients need a consistent way to register, select a diagnostic test, book an appointment and access reports without incomplete information, conflicting slots or delayed communication.

Step 2 – Brainstorming, Idea Listing and Grouping

Idea Group	Brainstormed Ideas	Purpose
Patient Setup	Standard patient registration; complete mandatory information; centralized patient profile.	Improve data quality and consistency.
Diagnostic Test Setup	Standard test catalog with test code, category, price and duration.	Make test selection clear and consistent.
Appointment Booking	Date/time selection, availability, capacity, duplicate and overlap validation.	Prevent booking conflicts.
Approval & Processing	Approval workflow, sample collection and laboratory processing.	Support the complete diagnostic lifecycle.
Report Management	Create and link diagnostic reports; manage report availability and patient access.	Deliver reports consistently.
Notifications	Approval and report notifications; booking, reminder, cancellation and refund scenarios.	Keep patients informed.
Payment & Refund	Test-based pricing, payment status and 10% cancellation deduction.	Provide transparent payment handling.
Security & Validation	ACLs, patient-specific access and dashboard/report validation.	Protect data and verify the solution.

IDEA PRIORITIZATION

Step 3 – Prioritizing the Proposed Ideas

The ideas were reviewed based on their expected impact and the effort required. The following order identifies the features considered essential and those that can be included as supporting features.

Priority	Idea	Impact	Effort	Decision
1	Standardized Medical Diagnosis Lifecycle	High	Medium	**Must have**
2	Patient Registration & Diagnostic Test Catalog	High	Low	**Must have**
3	Appointment Booking & Validation	High	Medium	**Must have**
4	Approval & Laboratory Processing	High	Medium	**Must have**
5	Diagnostic Report Management	High	Medium	**Must have**
6	Email Notifications	Medium	Low	Should have
7	Payment & Refund	Medium	Medium	Should have
8	ACL Security & Patient-specific Access	High	Medium	**Must have**
9	Reports & Dashboard	High	Medium	**Must have**

Prioritized Solution Direction

The Medical Diagnosis Center will be developed around a standardized patient and diagnostic-test setup. Appointment validation will then be added, followed by approval and laboratory processing, report delivery, notifications, payment and refund handling, and final security and reporting validation.

The prioritization provides a practical sequence for planning the project work and keeping the patient journey at the centre of the solution.
